

OPERATOR ATTESTATION

Discharge of the *NoSideChannel* hypothesis — theapertures.app as an A⁵O GatedSystem

Recitals

1. AgentOBO Inc., a Delaware corporation (File No. 10272951; UEI GGLZDKW3CMQ7; CAGE 17EB1), is the operator of the A⁵O Gate served at <https://theapertures.app> and of its execution endpoint POST /api/issue (the “Gate”).

2. The Lean 4 file **Deployment.lean** (SHA-256 b6e79d8f3000d99e52d2e0849a81ed432c7264e7a5e9233f6767db471b00af67), signed under seal by the undersigned on 2026-09-09 at 08:46:38 GMT (LegalZoom Envelope 012c0f66-c0df-44aa-ab61-e679bd818a19), imports A5O.lean v4 (SHA-256 0e5ebe3f5113727ae0cd41ec4399661a352fcc4fb522fcfe7ef7be3318f6b452) and Closure.lean (SHA-256 af6b3233bdeee80b8312a9138111c597d37f17b792a749d53844314e3a79a933) unmodified, compiles on Lean 4.33.1, and reports no axiom dependencies for the theorems *Apertures.apertures_accountable*, *Apertures.allow_satisfies_O* and *Apertures.deny_not_executed*.

3. The theorem *Apertures.apertures_accountable* establishes accountability over every execution at the Gate, in the sense of the predicate *Accountable* of Closure.lean, conditional on one hypothesis defined in Deployment.lean as:

```
def NoSideChannel : Prop :=
  ∀ r : Receipt, r.executed = true → r.allow = true
```

4. The evidentiary witnesses to that file — the ALLOW receipt RCT-A5O-INSIDER-BRIEF-2026-09-09 (decision ALLOW, execution_event EXECUTED at 2026-09-09T08:24:06.373Z, issued_at 2026-09-09T08:24:06.363Z; Envelope c91f50a4-08d6-4f7f-8936-dfb8965c6894) and the DENY receipt of the same identifier (decision DENY, RC-DENY-REVOKED, no execution_event; Envelope 33aacac7-bfab-478c-966c-568fae2e45ea) — were signed under seal by the undersigned on 2026-09-09.

5. The hypothesis *NoSideChannel* is a property of the server-side implementation of the Gate and is not observable or provable from the public surface. It can be discharged only by the operator.

Attestation

AgentOBO Inc., by the undersigned as its Founder and Chief Executive Officer, attests that the server operating <https://theapertures.app> performs no execution of any action except as an *execution_event* written into the hashed and signed body of a receipt whose *decision* is ALLOW, issued by POST /api/issue; that no other execution path exists on that server; and that, accordingly, the proposition *NoSideChannel* as defined in Deployment.lean holds of the Gate as deployed on the date of this attestation.

Effect

6. Upon this attestation the sole hypothesis of *Apertures.apertures_accountable* is discharged on the record, and the theorem stands of the Gate as deployed without further condition: every execution at theapertures.app in an area of consequence resolves to a principal for whom the predicate O of A5O.lean v4 holds at the moment of decision.

7. This attestation speaks as of its date and to the deployment identified by the published signing keys A5O-SIGN-KEY-ED25519-PROD-2026 and A5O-SIGN-KEY-MLDSA87-PROD-2026 and revocation snapshot sequence 1. Any change to the execution path of the Gate that would falsify *NoSideChannel* requires a superseding attestation.

8. Nothing in this instrument discloses, and the undersigned does not by it disclose, any private key material, key custody arrangement, or server internals beyond the single proposition attested.

Executed under the A⁵O seal on the date stated in the electronic signature block.
