The A⁵O Governance Operator™ - Lean 4

Accountable Delegated Authority

A Machine-Checked Necessity Result for Accountable
Delegated Authority

For thirty years the logic of delegated authority
rested on pen and paper. I ran it through a machine.

New paper, machine checked in Lean 4. A six
condition predicate for accountable delegated
authority: cryptographic binding, identity, mandate,
scope, revocation dominance, and appointment.

Single governor result derived from an explicit
hypothesis on the signature predicate, not assumed.
Necessity direction, converse disclaimed. Zero sorry.
Sealed and timestamped on the public blockchain.

Block 964554, transaction

78f1c12071618375df1f23410075da604c171583009fe4e
b69300c0717923172
Block 964600, transaction
457d89db25e656defc38137eec928517dfb32e77862968
7bb359dd54827d32fd

A5O.lean exists in three versions, each labeled
and independently checkable.

v2 — SHA-256

c219cb0e0c0e8b3948fb0d04060afaaef9da705cfc06aef
732376cce47c44ec6, 696 lines. This is the file the
sealed paper describes, reproduced in the report of 25
August 2026 and referenced by the paper's §12 and
cover page. Attested at Bitcoin blocks 965627, 965642,
and 965689.

v3 — SHA-256

2fde9ccbf3ff8d851e1bbf6dcb0de6809d67cf8d2be2fbf4
40da8387cc13de2a, 736 lines. This is A5O.lean at tag
paper-sealed-2026-08-29 — v2 plus a
RevocationConsequences section, making revocation
dominance load-bearing. Attested at Bitcoin blocks
965627, 965642, and 965689.

v4 — SHA-256

0e5ebe3f5113727ae0cd41ec4399661a352fcc4fb522fcfe
7ef7be3318f6b452, 792 lines. This is the 2026-09-07
repair: the nine axioms in v2 and v3 are restated as
explicit hypothesis parameters on the theorems that
consume them, and all 33 theorems in the file report

no axiom dependency. Submitted to OpenTimestamps on 2026-09-07T08:44:33Z; attested at Bitcoin blocks 965908 and 965933.

v2 and v3 carry the nine axioms later found individually inconsistent as stated — each was generalized by Lean over every predicate of its declared type rather than the one predicate the file reasons about, so each derives False when instantiated at a pathological predicate. The sealed paper (.tex/.pdf) is unrevised by this finding.

Two signed corrections address defects found after the paper was sealed. Neither edits the sealed paper; both are issued separately, per standing practice.

Correction to Executive Provenance Record AOB-PROV-2026-08-31-0001, §5.3 (Ref: AOB-CORR-2026-09-06-0001) — corrects §5.3's citation of tag paper-sealed-2026-08-29: that tag resolves to v3, not v2, while the paper's §12 and cover describe v2. Dated 2026-09-06, envelope f94f3dab-3fec-4a18-894b-33373ef268ff. Hash of the signed instrument:

8d446af28d95efe6e6b122e3d6819c7a42f2739b796c91457615e30aba69faf7, attested at Bitcoin block 965717 (verified directly on that instrument's own proof, not inferred; two of three calendars remain pending). The signed PDF itself is not published; its source text is, at hash
ae9ed913ca7361628b004ba0e191c7c9a3b97c90542bf0bc515e9f893d44b21c, same block. Directly:

artifacts.agentobo.ai/a5o/CORRECTION-2026-09-06-
provenance-5.3.md

Correction: all nine axioms were individually inconsistent (no reference number was assigned to this correction) — corrects the paper's §Axioms, §Uniqueness, and each of the five prior-art sections, which described the nine axioms as reasonable, independently-justified assumptions; each was in fact individually inconsistent as stated, and v4 is the repair.

Dated 2026-09-07, envelope fa7e9727-b043-4764-a679-58df8d24147e, signed 2026-09-07T08:33:39Z.

Hash of the signed instrument:

dc15cb164d8f2d41516de6b4661db8535736847a8facfd
02b2dd0d126d756d6e. Submitted to OpenTimestamps
on 2026-09-07T08:51:43Z; attested at Bitcoin blocks

965908 and 965933. Directly:

artifacts.agentobo.ai/a5o/corrections/2026-09-
07/Correction to the paper_ all nine axioms were
individually inconsistent - Signed.pdf

Three further developments extend the proof
beyond A5O.lean. Each is signed, committed,
and Bitcoin-anchored; each directory carries
its own Check.lean and axioms.txt.

v4/hops — the delegation-chain lineage and its
companion. Multi-hop delegation formalized as
single-hop appointment iterated: the appointer of one
receipt is the agent of an earlier one, and revocation
cascades downstream. Fifty-two theorems, no axiom

dependency. Seven signed instruments; proofs attested at Bitcoin blocks 967682, 967703, and 967720.

Directly: artifacts.agentobo.ai/a5o/v4/closure/hops-companion-closure-2026-09-19.md

v5 — the live gate's deployment closure. The production ledger of theapertures.app exported as a signed trace, consumed by a Lean adapter, and proved to satisfy the gate's own checkers, with the two hypotheses Lean cannot discharge carried as signed operator attestations. Attested at Bitcoin block 966664.

Directly: artifacts.agentobo.ai/a5o/v5/README.md

v4/clock — the Clock Standard, Giza, and DataCenter, 19 September 2026. The A⁵O Clock Standard (17.5 ns, 400/7 MHz) fixed as the time axis of the proof: strict precedence, one state per tick, revocation dominance on the clock, and an exposure bound of one tick under a single stated hypothesis. Two exploratory files carry the same constant into arithmetic on the royal cubit and into the physical placement of a ledger relative to its gate, with overlay labeled as such. Six signed instruments, both versions of each file; proofs attested at Bitcoin blocks 967720, 967728, 967736, and 967784.

Directly: artifacts.agentobo.ai/a5o/v4/clock/proof-record-2026-09-19.md

Full index, all versions, both corrections, and the three developments above:

artifacts.agentobo.ai/a5o/README.md

Re-check with Lean 4.14.0 for v2, v3, and v4, and Lean 4.33.1 for v4/hops, v4/clock, and v5: lean A5O.lean, then lean Check.lean, and compare the output to axioms.txt. Each directory carries its own Check.lean and axioms.txt. Verified, not ratified.

Additional Information

Two corrections have been issued since the paper was sealed. Neither edits the sealed paper or the sealed provenance record.

6 September 2026 — Correction to the Executive Provenance Record §5.3 (AOB-CORR-2026-09-06-0001), signed and stamped (Bitcoin block 965717). It records that the repository tag carries v3 while the paper describes v2.

<https://artifacts.agentobo.ai/a5o/CORRECTION-2026-09-06-provenance-5.3.md>

7 September 2026 — Correction: all nine axioms were individually inconsistent. Signed (envelope fa7e9727-b043-4764-a679-58df8d24147e) and stamped (Bitcoin blocks 965908 and 965933). It records that the nine axioms in v2 and v3 were inconsistent as stated, and that v4 restates each as an explicit hypothesis on the theorems that use it.
