

OPERATOR ATTESTATION 1 OF 2

Discharge of *CheckersSound* — *a5o/v5/Deployment.lean*, production trace of 2026-09-12

Recitals

1. AgentOBO Inc., a Delaware corporation (File No. 10272951; UEI GGLZDKW3CMQ7; CAGE 17EB1), is the operator of the A⁵O Gate served at <https://theapertures.app> (the “Gate”), whose decision endpoint is POST /api/issue and whose ledger, receipt and execution chains are held in the Gate’s own database.

2. The Lean 4 file of record **a5o/v5/Deployment.lean** (SHA-256 e07c69ae33d1d77e3c8e657f12f8a0fb58d233e8fd5873557c6564afcfdd59da) states the theorem *apertures_accountable* conditional on four obligations: *CheckersSound*, *DecisionsFollowChecker*, *NoSideChannel* and *CoversActualExecutions*.

3. The adapter **a5o/v5/adapter/AperturesTrace_20260912.lean** (SHA-256 96369a093189710eac6d6b2e3748d00f9996bb12a9045d15a4d38656de756e0b) transliterates the Gate’s six checkers from *apertures-app* commit f683e50e9c0a2130fd003cda8a56b5b756b6812f — the code running when every receipt below was issued — and embeds the production trace **a5o/v5/adapter/AperturesTrace_20260912.json** (SHA-256 c5ba5e2cfa4be0f8e9f9a97259f3bdaf2666fe7bb85d44d03d039e9803e19ed5; export_hash_sha256 20ff8dd98f35cc2f758c6b8dcaef4a2ce924b145e36d6b6319da45739930ef9d; exported 2026-09-12T08:05:45.566Z; nine receipts, receipts chain seq 2–10; four executions, execution chain seq 2–5; ledger seq 30–32). Over that trace it proves *DecisionsFollowChecker*, *NoSideChannel* and *UniqueReceiptIds* by computation, and *CheckersSound* for binding, identity, mandate and scope over the static tier and action tables, reaching *apertures_trace_accountable*. It compiles on Lean 4.33.1 with no sorry; its theorems depend on *propext* only.

4. The trace, every receipt in it, every execution row, the three ledger rows and the export signature were independently recomputed and verified against the Gate’s published production keys (A5O-SIGN-KEY-ED25519-PROD-2026, A5O-SIGN-KEY-MLDSA87-PROD-2026), as recorded in *a5o/v5/closure/pre-attestation-verification-2026-09-12.md*.

5. Two obligations cannot be established from the trace or the source and rest on facts about the running server. This instrument is Attestation 1 of 2; the two compose, and neither alone discharges *apertures_accountable*.

6. The obligation attested by this instrument is defined in *Deployment.lean* as:

```
structure CheckersSound (s : EvidenceSpec) (v : Checkers) : Prop where
  binding      : ∀ q, v.binding q = true → s.C q.principal q.agent q.action q.at_
  identity     : ∀ p, v.identity p = true → s.I p
  mandate      : ∀ a x, v.mandate a x = true → s.M a x
  scope        : ∀ a x, v.scope a x = true → s.S a x
  revocation   : ∀ q, v.revocation q = true → s.R q.principal q.agent q.action q.at_
  appointment  : ∀ q, v.appointment q = true → s.Appointed q.principal q.agent
q.action q.at_
```

Attestation

AgentOBO Inc., by the undersigned as its Founder and Chief Executive Officer, attests that the six checker functions of the Gate — binding, identity, mandate, scope, revocation and appointment, as implemented in *lib/gate.js* at the commit named in Recital 3 and transliterated in the adapter — are the checkers whose results appear in the *checks* block of every receipt issued on the Gate's default A5O-RCT-1.3.x path; that the decision of every such receipt is the conjunction of those six results and nothing else; that the binding, identity, mandate and scope checkers evaluate the static tier and action tables exactly as transliterated; and that the revocation and appointment checkers evaluate, at the moment of decision, the Gate's server-held, hash-chained appointment ledger — a grant row existing for the appointment identifier, tier and action named in the request, and no revocation row for that grant — and no other source, so that the trace-relative evidence for those two checkers in the adapter denotes a ledger lookup and not a request-supplied or fixed value. Accordingly *CheckersSound* holds of the Gate as deployed, for the evidence specification the adapter states.

Effect and scope

7. Upon this attestation the first of the two remaining obligations of *apertures_accountable* is discharged on the record for the Gate as deployed. The theorem stands of the Gate only upon the additional discharge of *CoversActualExecutions* by Attestation 2 of 2. This instrument attests the source of truth each checker consults; it does not attest the contents of the ledger or registry.

8. This attestation speaks as of its date, to the Gate as deployed from *apertures-app* commit f683e50 and its successors that leave the six checkers and the execution path unchanged, under the production keys named in Recital 4 and ledger sequence 32. Any change to a checker's source of truth or to the execution path requires a superseding attestation.

8a. This instrument does not speak to receipts issued on the separate A5O-RCT-1.4 path (*issue14()*), which carry no *checks* block, write no ledger, receipt or execution row, perform no execution, and are outside the trace of Recital 3.

9. Nothing in this instrument discloses, and the undersigned does not by it disclose, any private key material, key custody arrangement, admin credential, ledger or registry contents, or server internals beyond the proposition attested.

Executed under the A⁵O seal on the date stated in the electronic signature block.

Fitzgerald J. Heslop

Founder & Chief Executive Officer, AgentOBO Inc.
Chairman, Appointed Intelligence Institute (in formation)
