

OPERATOR ATTESTATION 2 OF 2

Discharge of *CoversActualExecutions* — a5o/v5/Deployment.lean, production trace of 2026-09-12

Recitals

1. AgentOBO Inc., a Delaware corporation (File No. 10272951; UEI GGLZDKW3CMQ7; CAGE 17EB1), is the operator of the A⁵O Gate served at <https://theapertures.app> (the “Gate”), whose decision endpoint is POST /api/issue and whose ledger, receipt and execution chains are held in the Gate’s own database.
2. The Lean 4 file of record **a5o/v5/Deployment.lean** (SHA-256 e07c69ae33d1d77e3c8e657f12f8a0fb58d233e8fd5873557c6564afcfdd59da) states the theorem *apertures_accountable* conditional on four obligations: *CheckersSound*, *DecisionsFollowChecker*, *NoSideChannel* and *CoversActualExecutions*.
3. The adapter **a5o/v5/adapter/AperturesTrace_20260912.lean** (SHA-256 96369a093189710eac6d6b2e3748d00f9996bb12a9045d15a4d38656de756e0b) transliterates the Gate’s six checkers from *apertures-app* commit f683e50e9c0a2130fd003cda8a56b5b756b6812f — the code running when every receipt below was issued — and embeds the production trace **a5o/v5/adapter/AperturesTrace_20260912.json** (SHA-256 c5ba5e2cfa4be0f8e9f9a97259f3bdaf2666fe7bb85d44d03d039e9803e19ed5; export_hash_sha256 20ff8dd98f35cc2f758c6b8dcaef4a2ce924b145e36d6b6319da45739930ef9d; exported 2026-09-12T08:05:45.566Z; nine receipts, receipts chain seq 2–10; four executions, execution chain seq 2–5; ledger seq 30–32). Over that trace it proves *DecisionsFollowChecker*, *NoSideChannel* and *UniqueReceiptIds* by computation, and *CheckersSound* for binding, identity, mandate and scope over the static tier and action tables, reaching *apertures_trace_accountable*. It compiles on Lean 4.33.1 with no sorry; its theorems depend on *propext* only.
4. The trace, every receipt in it, every execution row, the three ledger rows and the export signature were independently recomputed and verified against the Gate’s published production keys (A5O-SIGN-KEY-ED25519-PROD-2026, A5O-SIGN-KEY-MLDSA87-PROD-2026), as recorded in a5o/v5/closure/pre-attestation-verification-2026-09-12.md.
5. Two obligations cannot be established from the trace or the source and rest on facts about the running server. This instrument is Attestation 2 of 2; the two compose, and neither alone discharges *apertures_accountable*.
6. The obligation attested by this instrument is defined in Deployment.lean as:

```
def CoversActualExecutions (d : Deployment)
  (actual : Agent → Action → Time → Prop) : Prop :=
  ∀ a x t, actual a x t → Executes d a x t
```

Attestation

AgentOBO Inc., by the undersigned as its Founder and Chief Executive Officer, attests that the server operating <https://theapertures.app> performs no execution of any action except through the single code path that holds a receipt with the

decision ALLOW and, in the same database transaction as that execution, appends a row to the Gate's hash-chained execution log referencing that receipt; that the database schema permits an execution row to reference only a receipt whose stored decision is ALLOW; that no other execution path exists on that server; and that, accordingly, the execution log is complete — every actual execution at the Gate appears in it — so that for any trace exported from that log, including the trace named in Recital 3, *CoversActualExecutions* holds of the Gate as deployed for the executions in the exported window.

Effect and scope

7. Upon this attestation, taken together with Attestation 1 of 2 discharging *CheckersSound*, all four obligations of *apertures_accountable* are established for the Gate as deployed — two by machine-checked computation over the signed trace, two by the operator's statements in these instruments — and the theorem stands of the Gate without further condition for the trace of Recital 3: every actual execution at the *apertures.app* in that window resolves to a principal for whom the predicate *O* of *A5O.lean* v4 holds, with identity, mandate, scope, revocation and appointment each grounded as the adapter states. The adapter's remaining stated boundaries — *inAoC* unrestricted; *Time* instantiated as the commit index with execution-after-decision verified outside Lean; the receipts embedded as transcribed values verified outside Lean — are unaffected by this instrument.

8. This attestation speaks as of its date, to the Gate as deployed from *apertures-app* commit f683e50 and its successors that leave the six checkers and the execution path unchanged, under the production keys named in Recital 4 and ledger sequence 32. Any change to a checker's source of truth or to the execution path requires a superseding attestation.

9. Nothing in this instrument discloses, and the undersigned does not by it disclose, any private key material, key custody arrangement, admin credential, ledger or registry contents, or server internals beyond the proposition attested.

Executed under the A⁵O seal on the date stated in the electronic signature block.

Fitzgerald J. Heslop

Founder & Chief Executive Officer, AgentOBO Inc.

Chairman, Appointed Intelligence Institute (in formation)

Master of Ceremony & Ambassador of Service At Large
